EDUCATION

2022 - 2026

TON DUC THANG UNIVERSITY

- **Software Engineering**

TECHNICAL SKILLS

Programming languages:

- Python
- JavaScript
- Dart
- C, C# (.NET)

Frameworks/Platforms:

- ReactJS
- Node.js (Express)
- HTML, CSS, Bootstrap
- Flutter, Firebase

Database:

- MongoDB, My SQL

Other:

- Docker, Git/GitHub

PROFILE

I am a final-year Software Engineering student at Ton Duc Thang University. I have a background in data structures, algorithms, and object-oriented programming (OOP). I am seeking an internship opportunity as a Fullstack Developer to apply my knowledge of programming languages (e.g., React, Java, Python) to real-world projects and contribute value to the company.

WORK EXPERIENCE

Email Application Cross-Platform — 2024: 29TH SEP - 8TH DEC

- **Team size:** 3 members
- **Position:** Fullstack Developer
- **Technologies:** Dart, Flutter, Firebase (Authentication, Firestore, Storage)
- **Describes:** The web application allows users to send, receive, and manage messages similar to system email.
- **Specific work:**
  - Responsive UI design (compatible with all devices) by Flutter
  - Develop a logic system to connect with Firebase, processing real-time data streams for email sending/receiving and push notifications. emails in real time, with compatibility for Android and iOS.
  - Directly develop core modules, optimize data synchronization between Client and Server to reduce latency when loading messages.

E-Commerce website — 2025: 13TH APR - 18TH MAY

- **Team size:** 3 members
- **Position:** Front-end/Back-end Developer
- **Technologies:** ReactJS, Node.js, MongoDB, Cloudinary
- **Describes:** A specialized e-commerce system for electronic devices, supporting a flexible shopping process between guest and logged-in user modes, integrating order management and delivery.
- **Specific work:**
  - Backend & API: Building a RESTful API system (Node.js/Express) to comprehensively handle CRUD operations and manage data flexibly.
  - Database & Optimization: Designing a Schema using Mongoose, optimizing complex queries to ensure optimal product page load speed.
  - Security: Implementing user authentication via JWT and securing sensitive data with Bcrypt.
  - Frontend & Storage: Developing a responsive interface using ReactJS; integrating Cloudinary to manage and optimize product image storage.

WORK EXPERIENCE

SubReddit Recommendation System

19TH OCT 2025 - 25TH JAN 2026

- **Team size:** 2 members
- **Position:** Fullstack Developer
- **Technologies:** Python, Flask, ReactJS, SQLite
- **Describes:** SubReddit recommendation system approaches via user sentiment and topic analysis abstract
- **Specific work:**
  - Develop a Reddit API (PRAW) data collection system to retrieve posts and comments based on their most recent time.
  - Preprocessing raw data (cleaning, tokenization) for analysis.
  - Implement Sentiment Analysis and Topic Modeling (BERTopic) to understand user behavior.
  - Develop a user interface using ReactJS, displaying data visualization charts and personalized suggestion lists.

EyeGlasses Shop Website

19TH DEC 2025 - 15TH FEB 2026

- **Team size:** 1 member
- **Position:** FullStack Developer
- **Technologies:** ReactJS, Node.js, MongoDB
- **Describes:** A website for a specialized eyeglasses store, designed for businesses that import and sell products on demand.
- **Specific work:**
  - Architecture: Design a multi-connection database on MongoDB to independently manage permissions, invoices, and inventory.
  - Inventory: Develop logic for managing product variations (SKUs/Variants) and real-time inventory tracking.
  - Operations: Design a dedicated label printing template for the Godex G500 thermal printer using CSS with precise formatting (32mm/43mm).
  - Security: Implement a permission management system (RBAC) for Admin/Staff, secure with JWT and Bcrypt encryption.
  - Deployment: Package the application with Docker and set up an automatic CI/CD flow to update to Vercel and render.
